

SQUIRREL MONKEYS

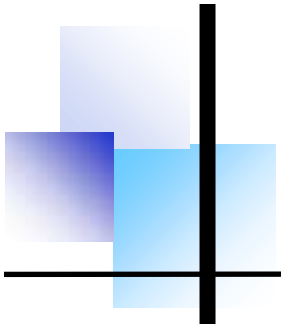

By Chanel

Food

They eat fruit and insects. Their sharp narrow teeth are well suited for biting insects. They have good eye sight and color vision like ours so they can easily spot colored fruits.

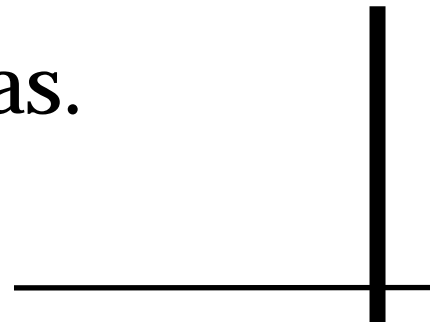

Home

The squirrel monkey lives in the treetops in the forest in quite large groups of up to 100

monkeys in some areas.

Length

The squirrel monkey is 15

inches in length . His tail is 14 to 18 inches. The squirrel monkey has no hair around his mouth or nostrils.

Habitat

Squirrel monkeys live in some parts of South America, Brazil, Peru, Bolivia, Paraguay, Panama and Costa Rica.
