# Wild Ponies

Done by Melissa

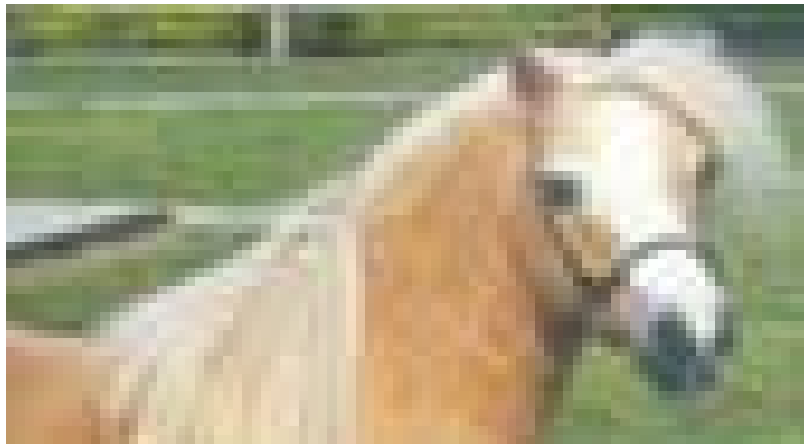

---

# *Enemies*

Wild ponies only have a few natural enemies. Their enemies are human being and also wolves. Sometimes mountain lions are their enemies. The flies bite them while they are standing eating grass.

# Food

Ponies eat leaves, twigs,  
grass and poison ivy.

# Size

The ponies size is about 12-13 hands. It is due to their bad diet. The ponies would sip salt water. Some times they drink a little of it. Wild ponies drink twice as much as normal ponies do.
