

# *Wolf*

By Stephen

# Babies

Wolf babies are called pups. Wolves can have 5 babies in 10 minutes.

Wolves are very protective of their babies. If someone tries to touch the babies the mother will attack them.

After 3 years the mom leaves the babies.

---

# Enemies

When the wolves are very old their enemies are eagles, bears, beavers, and lots more animals. The bear can hurt the wolf badly. The eagles can kill a wolf. A wolf is scared of people. Wolves will go crazy if people try to hurt them.

# Food

Wolves normally prey on large hoofed mammals like deer. The arctic wolves must hunt together in packs when seeking large prey.

# Habitat

Wolves can be found in the forests and on the tundra. They are also found in the deserts, plains and mountains.

# Lifespan

Wolves live eight to 12 years. The oldest wolf known was 17 years old. When a wolf gets attacked by a grizzly bear, it gets badly hurt and in a week it dies. A wolf is very sensitive when it gets hurt.

# About the Author

Stephen is cool he likes to go to  
Rossbrook. He gets pick's to do lots of  
stuff. He wins lots of rewards.
